## WHY

College is already stressful as it is and especially freshman year, so many things get thrown at you. Trying to get information about the food you will be eating and where should not be a stressful situation. Our team decided to solve this issue by creating an app that makes knowing information about any dining hall on campus easy and accessible.

## DESIGN PROCESS

After multiple consultations and receiving feedback, we achieved our final Figma prototype. The design was shaped by student feedback and refined through usability testing and heuristic evaluations.

## RESEARCH

Throughout the interview process we learned about what would help make IU dining better here at IU. The people we interviewed talked about how they wished that there was a better app or website to access dining hall information more easily. Also Expressing how they wished that there was a way to know what exactly the dining hall was serving that day and to have a way to pre-order from the dining halls to minimize the wait time. So ultimately we decided to create an app that will help students navigate IU in a more easy efficient way.

## CONCEPT

Our app is designed in a way where any IU student can go into it and find quick and easy information about any dining hall on campus. We decided to incorporate aspects of pre ordering from a dining hall online, being able to see what dining hall is closest to your current location, to have all dining hall information, and to be able to see what the dining hall is serving for that day and the next.
